

Transaction Regulatory Advisory Services | Project Manager for GDPR Adoption

Situation

The world's largest supplier of semiconductor chip manufacturing equipment turned to SolomonEdwards for assistance with compliance as the deadline to adopt the EU's GDPR standard rapidly approached.

The Company had initially attempted to run the project internally, but quickly realized it was larger in scope than originally thought and clearly required consulting assistance from a firm that could provide them with a set of templates and processes.

Solution

SolomonEdwards provided an experienced subject matter expert who had recently finished a similar engagement, to work with the Company's leaders, including the Legal and Human Resources teams.

The Consultant provided GDPR overview/road-mapping, program development and implementation, and aligned business processes, needs and requirements with data privacy regulations, tools and technologies to ensure compliance.

- Helped support the identification of business processes and systems that relate to personal data and are deemed in-scope of GDPR.
- Developed project scopes and objectives, involved all relevant stakeholders and ensured technical feasibility.
- Developed a detailed project plan to track progress.
- Managed projects from kickoff through deployment.
- Translated GDPR compliance standards into business and data management requirements in the form of user stories/functional specifications, and business change documentation.

Results

SolomonEdwards provided the GDPR templates and implemented a playbook for the Company to set up, follow and administer compliance going forward.

The client was able to leverage the solutions that SolomonEdwards provided and gained compliance, plus a manageable and scalable process for the future, thus avoiding millions of dollars in potential losses for failure to comply by the deadline.
